

## Exercise 1 - Managing Administrative Tools.

The Windows Administrative Tools folder in Windows 11 contains applications for managing a local computer's system.

These admin tools make it easy to manage Windows 11 system settings like:

- Event log audits.
- Restrict computer access with local computer policy.
- Disk volume management.
- Resource monitoring.
- Fending off unauthorized network traffic using Windows Firewall.

The Remote Server Administration Tools, or RSAT, can be used to extend the capabilities of a domain-joined workstation running Windows.

RSAT offers tools for managing domain joined servers, domain controllers, creating users, and managing security groups in the Active Directory Domain network, such as Active Directory Users and Computers.

In this exercise,

1. Download RSAT
2. Verifying remote connection from windows 11 client to networktute domain

### Topology

DOMAIN = networktute.com

NTSER22VM1 = Windows Server 2022 – Domain Controller

NTWIN11VM1 = Windows 11 – Domain Member

## Prerequisite

- *VMware Workstation 16 Pro*
  - When making this tutorial, we used the “Windows Server 2019” VM Template and “Windows 10 & later” VM Template. Since VMware didn’t have the updated templates.
- *Microsoft Windows Server 2022*
- *Microsoft Windows 11*

## Task 1:

RSAT (Remote Server Administration Tools) is a separate download from Microsoft's website. To successfully install RSAT on Windows 11, the Windows Update service must be started manually.

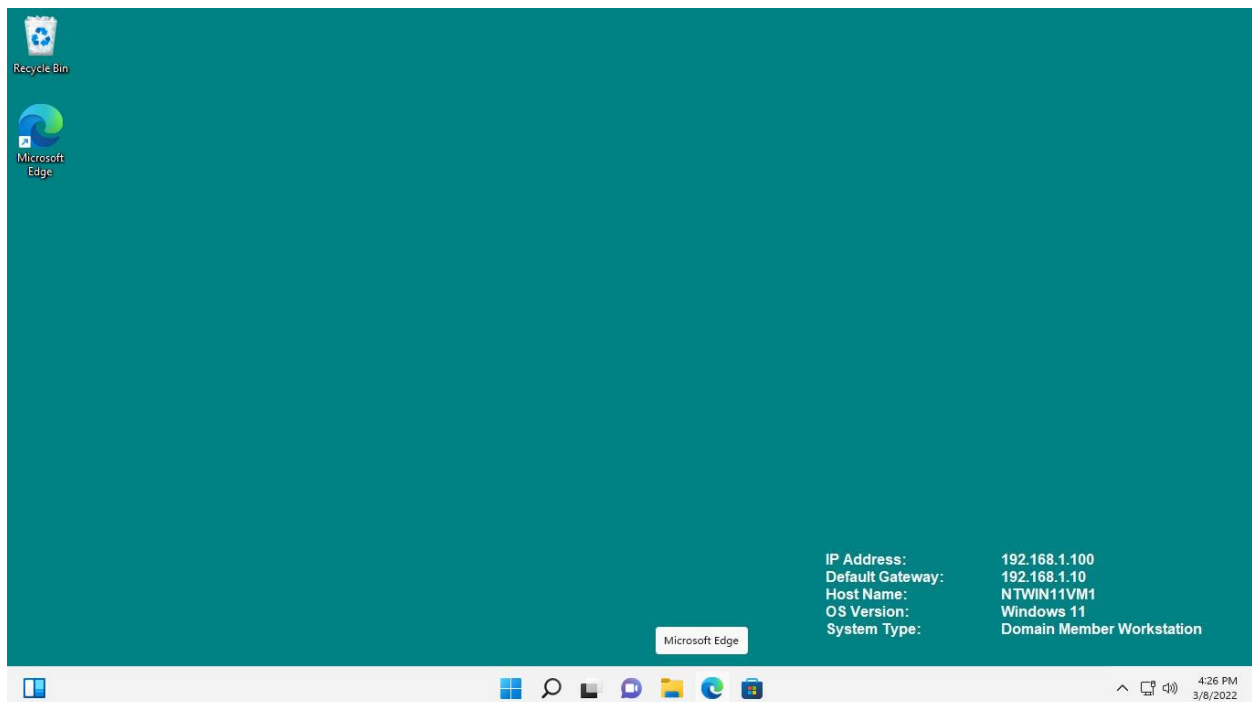

By default, the Windows Update service in Windows 11 is configured to manual update mode.

Now let’s, download RSAT and install it on a lab device.

### Step 1:

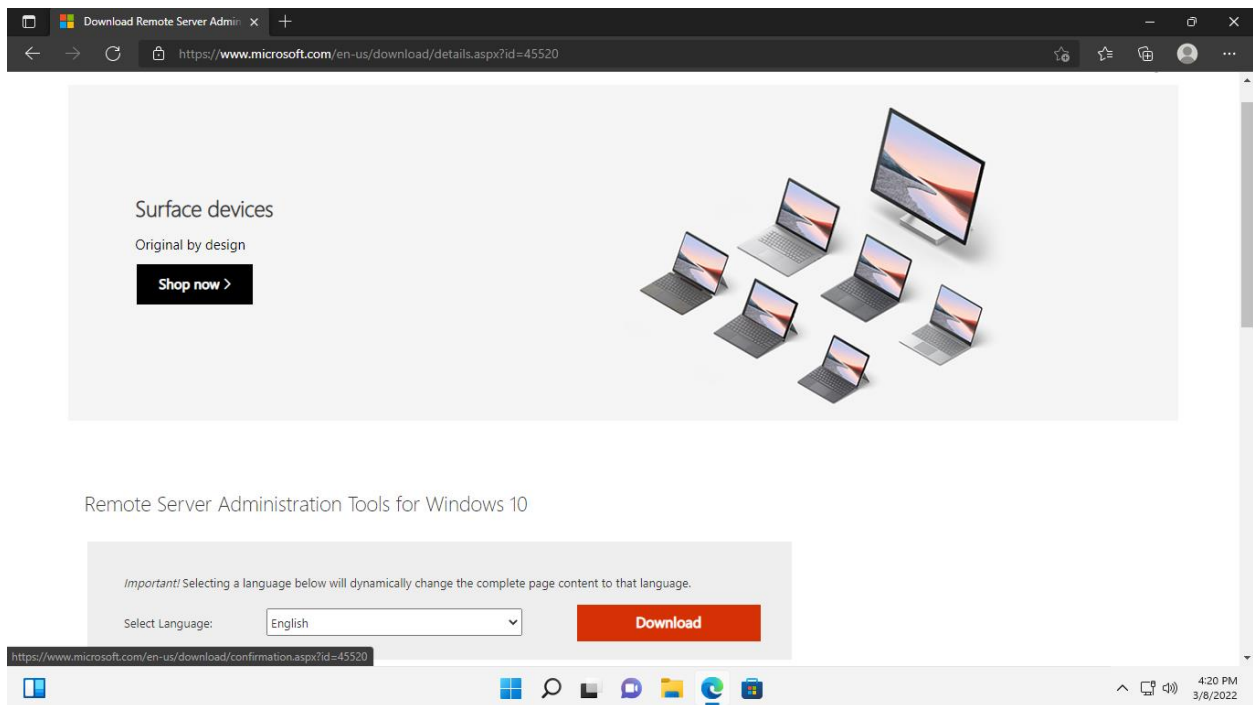

Connect to **NTWIN11VM1**.

Click **Microsoft Edge** on the **Taskbar**.

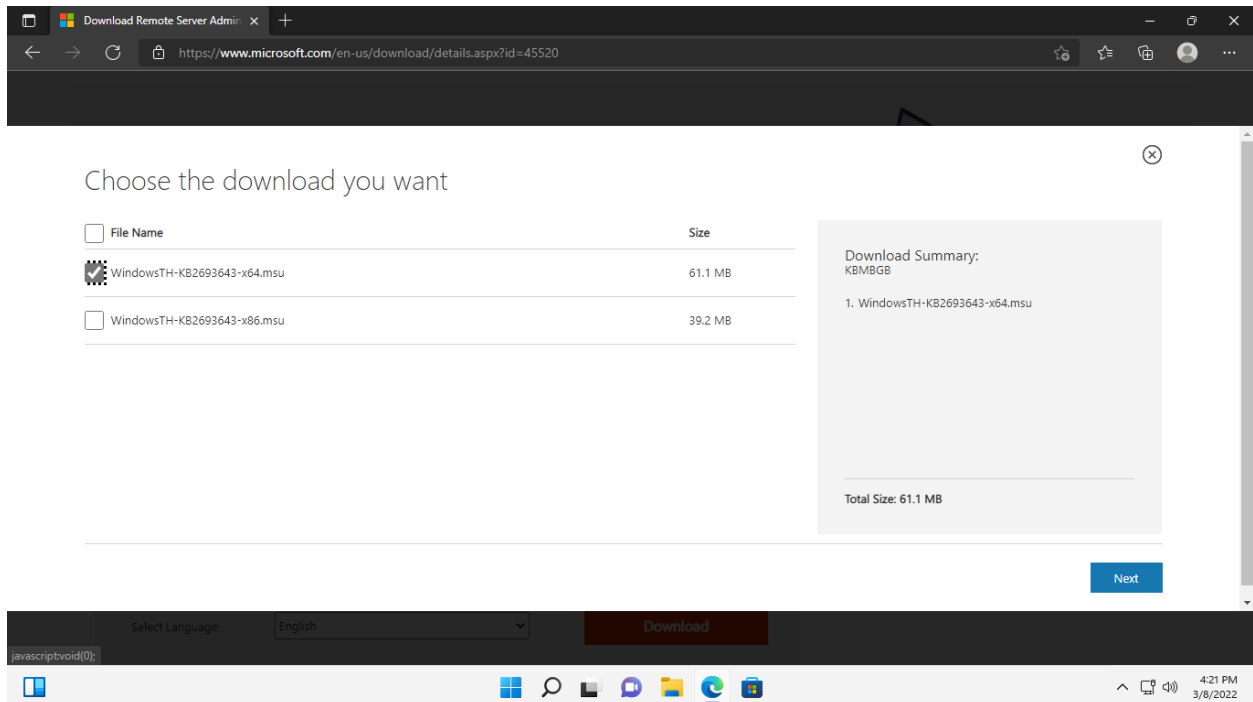

## Step 2:

Go to the **Microsoft RSAT** download page, Click **Download**

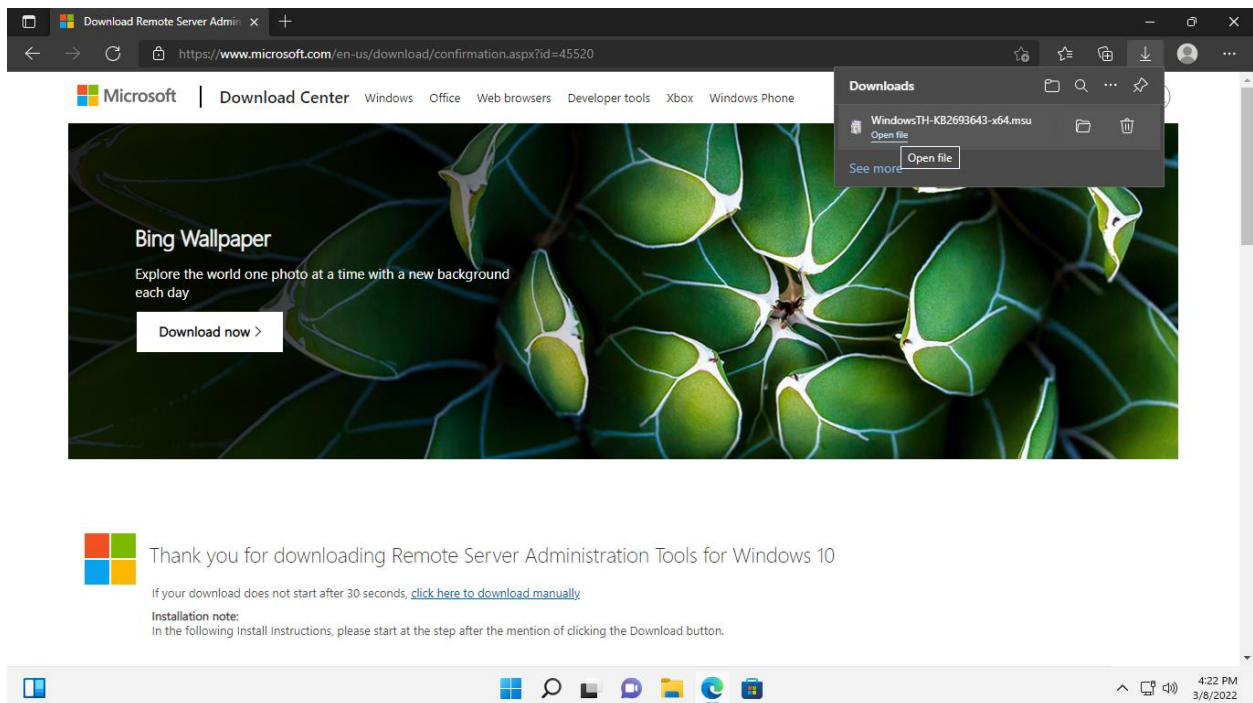

## Step 3:

Select 64bit and click **Next**.

## Step 4:

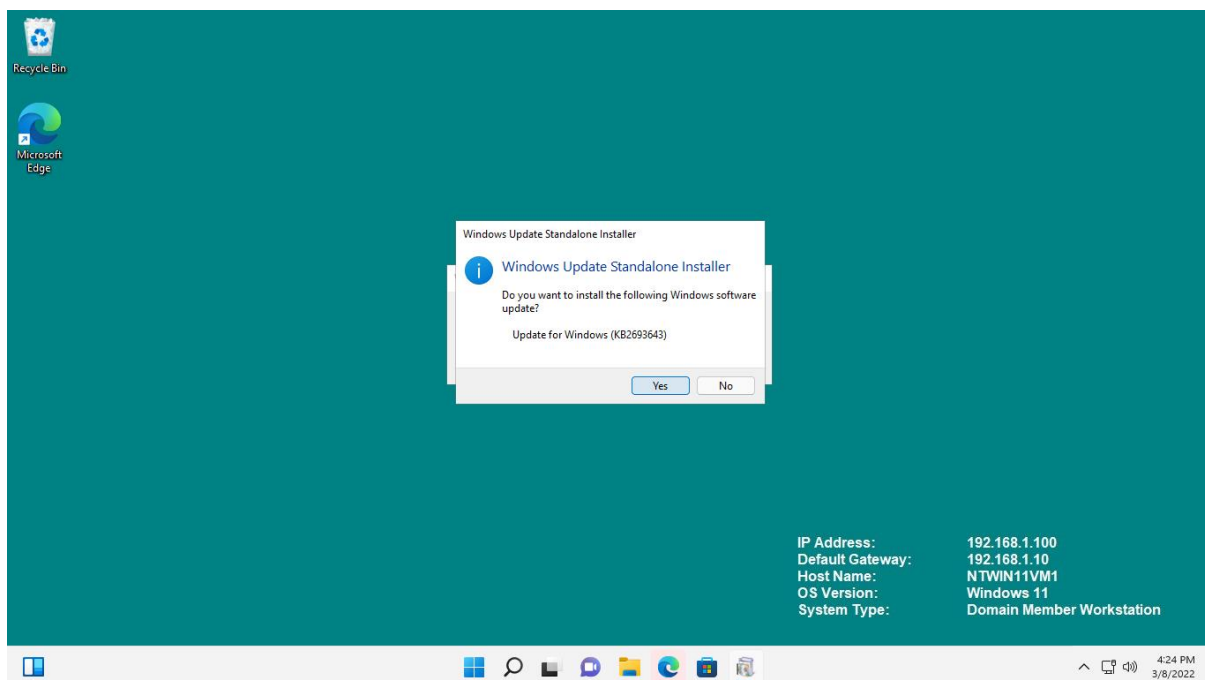

Once the download is complete, click **Open file**.

## Step 5:

Please wait while a search is being done on the computer about installed updates.

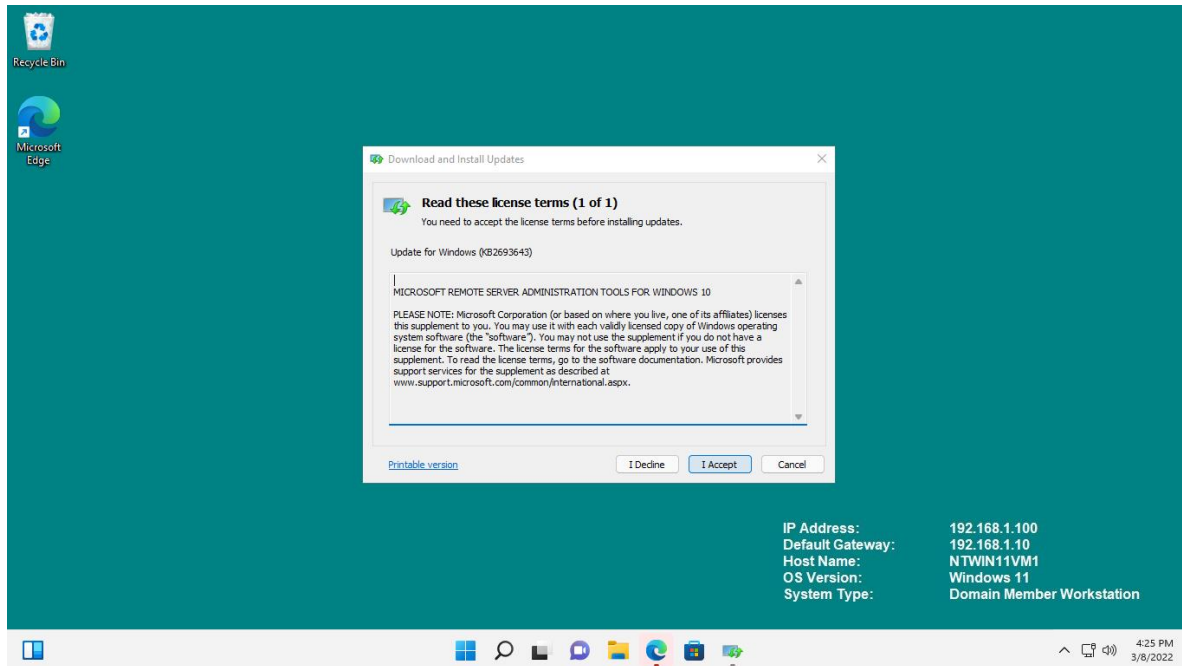

On the **Windows Update Standalone Installer** message box, click **Yes**.

## Step 6:

Please wait while the files are being downloaded and copied.

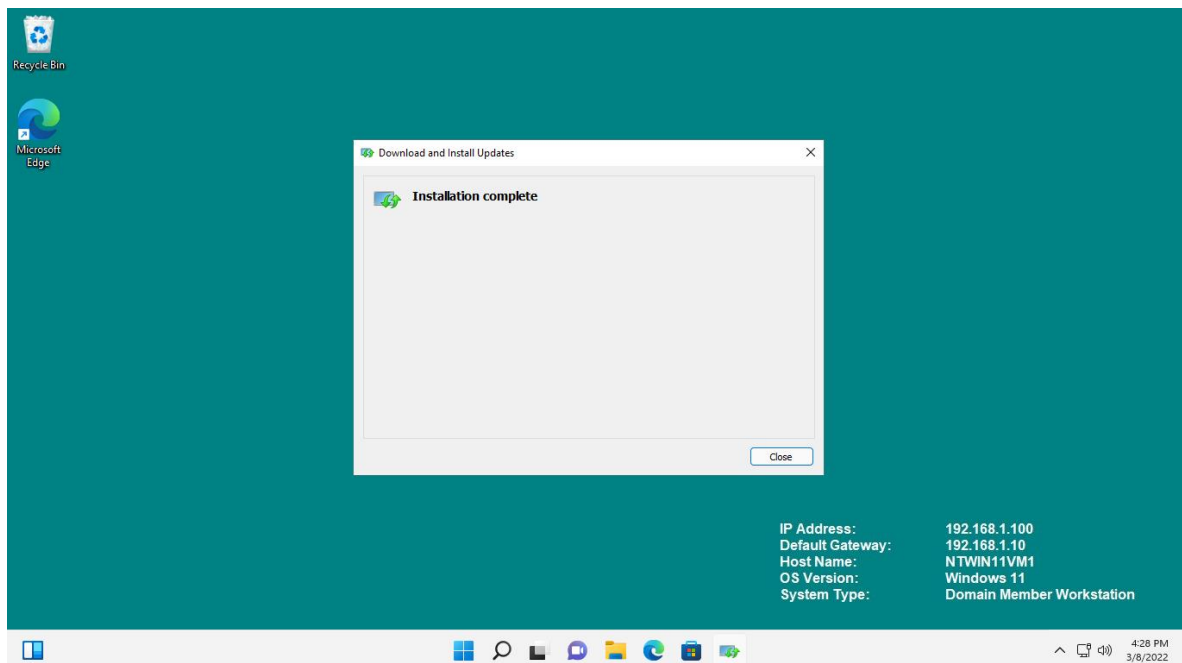

On the **Download and Install Updates - Read these license terms (1 of 1)** click **I Accept**

## Step 7:

Please wait a few minutes while the updates are installed.

When the **Installation complete** message is displayed, click **Close**.

## Task 2: Verify Functionality of Administrative Tools

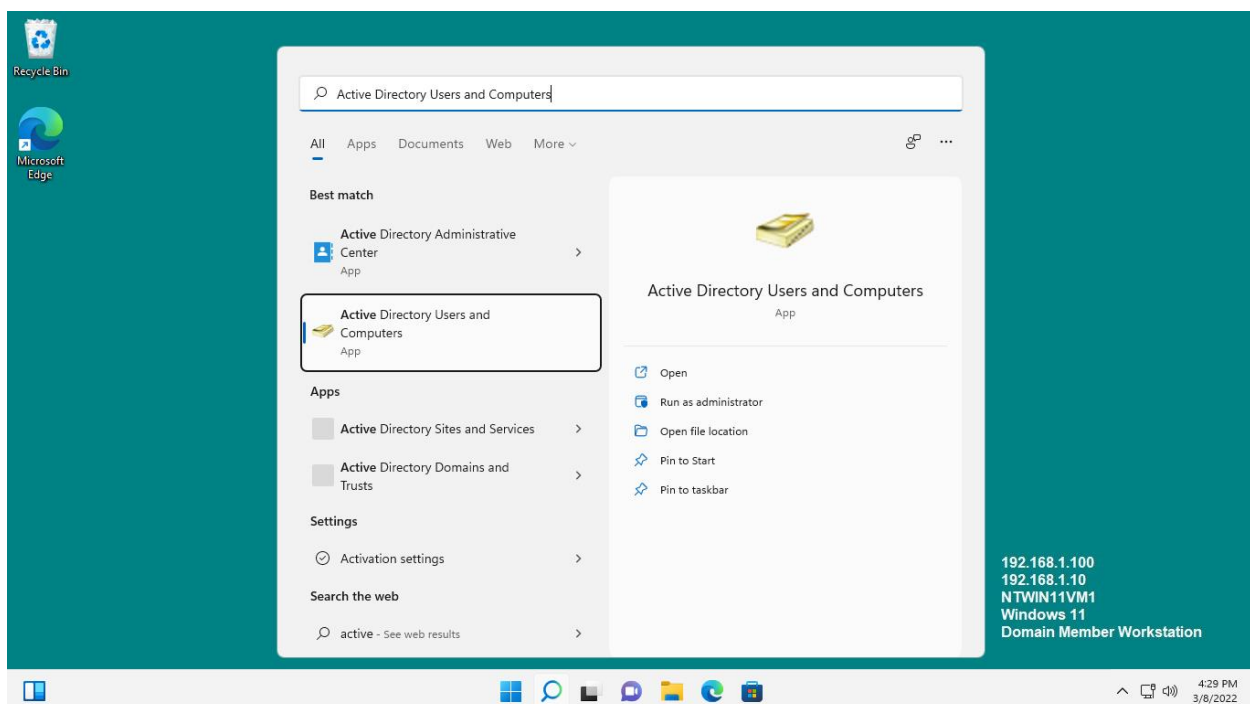

You will now verify that you can now remotely administer the networktute.com domain from a Windows 11 PC after installing RSAT.

In this task, we will access the RSAT on NTWIN11VM1 and remotely create a user on the networktute.com domain.

### Step 1:

Ensure you are connected to **NTWIN11VM1**.

Click the Start icon, then scroll down and expand **Windows Administrative Tools** and click **Active Directory Users and Computers**.

### Step 2:

The **Active Directory Users and Computers** snap-in is displayed listing the **networktute.com** domain available for administration. This confirms that remote administration of the domain network is now enabled on the server.

Expand the **networktute.com** domain and click the **Users** organizational unit.

Right-click **Users**, select **New > User**.

### Step 3:

On the New Object - User dialog box, in the First name box, type: **Elon**

In the Last name box, type: **Musk**

In the User logon name box, type: **Emusk** Click **Next**.

#### Step 4:

In the **Password** and **Confirm password** text boxes, type: **networktute@1**

Untick the **User must change password at next logon** box.

Tick the **Password never expires** box. Click **Next**.

#### Step 5:

On the **New Object-User** dialog box, a summary of the new user object is displayed.

Click **Finish**.

Back on the **Active Directory Users and Computers** console, click **networktute.com > Users**. Notice that the newly created user is now listed on the details pane at the right.

This confirms that the new domain user account is now remotely created on the **networktute.com** lab domain using **RSAT** installed on **NTWIN11VM1**.
